

- Load the dataset “CO2” and perform the following tasks:
 - I. Any Missing values in the CO2 dataset?
 - II. Print the first few rows of the data.
 - III. Only consider those with chilled Treatment plants, calculate the average CO2 uptake rate for each group of Plant.
 - IV. Find all the records that has the highest CO2 concentrations.
 - V. Find the maximum CO2 uptake for each plant level. Sort in descending order.
